Foreword	ix
Acknowledgements	xi
1. Introduction	1
2. The links between maternal education and child health	3
2.1 Infant and child mortality	3
2.2 Nutritional status	5
2.3 Other child health measures	6
2.4 How does maternal education affect child health?	8
3. Other benefits of educating women	15
3.1 Reduced fertility	15
3.2 Health investment	16
3.3 Improved status of women	16
3.4 Economic returns	17
4. The situation in the Western Pacific Region	19
4.1 Educational status of women and health measures	19
4.2 Primary and secondary enrolment rates	20
4.3 Secondary and tertiary education	20
4.4 Illiteracy rates	23
5. Constraints to women's education	25
5.1 Macroeconomic constraints	25
5.2 Household economic constraints	25
5.3 Constraints dictated by culture and tradition	26
5.4 Low status of women	26
5.5 Dealing with the constraints	27
5.6 Educating adult women	27

6.	Conclusions and recommendations	29
	Issue No. 1 - Lack of information	29
	Issue No. 2 - The perceived value of female education	30
	Issue No. 3 - Policies and programmes concerning education of girls	30
	Issue No. 4 - Adult literacy	32
	Issue No. 5 - Enhancing women's economic returns	32

## Annexes

Annex 1	Female gross enrolment ratio at the primary and secondary level (1979-1982), infant mortality rate and life expectancy at birth (1989-1991) in selected countries in the Western Pacific	33
Annex 2	Female illiteracy rate (1979-1982), infant mortality rate and life expectancy at birth (1989-1991) in selected countries in the Western Pacific	35
Annex 3	Literacy programmes: summary of essential needs	37

Bibliography	39
